SUMMARY

Detail-oriented React Specialist & Frontend Developer with 1+ years of experience in Responsive Web Design, highly interactive user interfaces. Proficient in React.js, modern JavaScript (ES6+), semantic HTML5/CSS3, Component-Driven Development, State Management, REST APIs, and client-side data fetching. Adept at translating high-fidelity design layouts into cross-browser compatible, pixel-perfect web applications with a focus on optimized user experience and efficient state management.

TECHNICAL SKILLS

Core Languages: JavaScript (ES6+), HTML5, CSS3, TypeScript

Libraries: React.js, Chart.js, React Hooks, Context API

Tools & Deployment: Vite, GitHub, Netlify

Design & Collaboration: Tailwind CSS, UI/UX Responsiveness

PROFESSIONAL EXPERIENCE

Freelance Frontend Developer

(Remote) Jakarta, Indonesia

Aug 2025 – Present

- **UI/UX Implementation:** 99%+ success rate in translating high-fidelity creative concepts into fully responsive, interactive web pages for multi-industry clients (Healthcare, FinTech, Travel).
- **Data Visualization:** Integrate dynamic data features utilizing Chart.js and React components, efficiently managing object properties to render 10+ interactive data points and complex data layouts smoothly.
- **Responsive Architecture:** Apply modern CSS paradigms (Flexbox, Grid, Media Queries) and smooth edge layout principles to ensure 100% flawless mobile-first responsiveness across mobile, tablet, and desktop viewports to enhance user experience.
- **Performance Focus:** Reduce codebase redundancy by 20% and optimized render times by engineering a library of lightweight, reusable React components tailored to strict client specifications.

TECHNICAL UTILITY PROJECTS

Show Local Time & Weather Integration | Frontend Developer

- **Core Stack:** JavaScript, Weather REST API, freeCodeCamp API, DOM Manipulation
- Engineered a dynamic tool that utilizes local location services and coordinates to fetch and display real-time weather data.
- Implemented asynchronous data fetching mechanisms and processed dynamic endpoints to seamlessly update the UI in under 1.5 seconds without page reloads.

TwitchTV API Stream Tracker | Frontend Developer

- Core Stack: React.js, JSON REST APIs, Client-Side Filtering.
- Developed an interactive application consuming public REST APIs to check, parse, and display stream statuses for multiple channels simultaneously.
- Engineered custom filtering logic using dynamic DOM manipulations to instantly toggle views between online and offline creators with zero layout shift (CLS).

Interactive Data & Application Suite | Frontend Developer

- Core Stack: React.js, State Management (Hooks), Audio Web APIs
- Built a fully customizable productivity timer using advanced React state management, incorporating 2 adjustable duration configurations (break/session lengths) and audio alert logic to signal state changes.
- Engineered a set of 9 interactive sound components by mapping unique audio data to explicit user keypress and click inputs, utilizing clean object-mapping structures.
- Co-engineered a high-precision mathematical application with a cross-functional peer, implementing robust error-handling and input validation to eliminate cross-browser bugs.
- Built a 2-player board application utilizing structured multidimensional state tracking to evaluate winning combinations and player turn sequences in real time.

CERTIFICATION

Introduction To Computer Science | Harvard CS50

- Key Skills: Algorithm, Data Structure, Basic Python

Legacy Frontend | freeCodeCamp

- Key Skills: React.js, Intermediate JavaScript

Front End Development Libraries | freeCodeCamp

- Key Skills: React.js, Intermediate JavaScript, State Management

Responsive Web Design | freeCodeCamp

- Key Skills: Developer Tools, CSS Flexbox and Grid, Media Queries, Semantic HTML5
